NAME: _____ System Title: _____ Code: _____ Presentation Schedule:_____ Time:_____

Criteria	Percentage	Excellent	Good	Fair	Poor
1. Deployed System with Complete Functions and UI/UX	**35%**	System is fully deployed and accessible. All required functions are complete, working properly, and aligned with the assigned system. User interface is highly organized, attractive, responsive, and easy to use.	System is deployed and most required functions are complete and working. UI is organized and usable with only minor issues.	System is deployed but some required functions are incomplete or not functioning properly. UI is somewhat organized but has noticeable usability issues.	System is not properly deployed or many functions are missing/non-functional. UI is confusing, poorly designed, or difficult to use.
2. ERP and Security Functions	**35%**	ERP-related processes and security functions are fully implemented and aligned with the assigned system. Access control, authentication, authorization, and data protection are properly applied.	Most ERP and security functions are implemented correctly with only minor issues or missing features.	Some ERP and security functions are implemented, but important components are missing or only partially working.	ERP and security functions are poorly implemented, missing, or not aligned with the assigned system.
3. Error Trapping	**30%**	Error handling is comprehensive and effective. System properly validates inputs, handles exceptions, and displays clear, user-friendly error messages without crashing.	Error handling is present in most parts of the system. Minor lapses exist, but the system generally handles invalid inputs and exceptions properly.	Error handling is limited. Some validations and exception handling are present, but several errors are not managed properly.	Little to no error trapping is implemented. System crashes easily or fails to provide useful feedback for invalid inputs or system errors.
